Functional Specification Triggerhub

Description:

Our app makes automation easy and effortless. In just a few clicks, connect your APIs and build smart workflows that run on their own. No more repetitive tasks—save time, stay focused on what matters, and let our platform do the work for you. The perfect tool for busy people who want to achieve more with less effort.

Pages available:

Homepage (website):
Experience a smarter way to work. Our platform makes automation easy and effortless—connect your APIs, build intelligent workflows, and let them run on their own. No more repetitive tasks, just more time to focus on what really matters. The perfect solution for busy people who want to achieve more with less effort.

Dashboard (website & app):
Manage and monitor all your workflows from one place. The dashboard gives you a clear overview of your active automations, their statuses, recent activity, and performance. Easily edit, pause, or trigger workflows in just a few clicks—all from a single, intuitive interface.

Services (website & app):
Browse our library of available services and integrations. Whether you're connecting popular APIs or niche business tools, our platform lets you link them effortlessly. Combine multiple services into powerful workflows—no coding required.

About (website):
Our mission is simple: to make automation accessible to everyone. Behind this platform is a team passionate about productivity, efficiency, and smart technology. Learn more about our story, our values, and why we're building the tools that help people work smarter every day.

Account (website & app):

Manage your personal details and access settings with ease. The account page lets you update your profile information, adjust preferences, and keep your details up to date. From here, you can also securely log out of your account whenever needed in one simple, organized space.

Workflow (website & app) :

See and manage all your action/reaction automations in a single view. The workflow page lets you review your existing setups, edit them to match your needs, or create new ones from scratch. Quickly connect actions and reactions to build custom automations that run seamlessly in the background.

User Journey for the website:

1st Step – Home Page
Users arrive on the Home page, where they can view a brief description of the platform and freely explore its contents.

2nd Step – Explore Without Login
Without logging in, users can:

- Browse the Services page to see all available services and their offers (but cannot create workflows).

- Access the About page to learn more about the platform.

3rd Step – Login / Sign Up
When users wish to create or manage workflows, they must navigate to the Login/Sign Up page. Here, they can either:

- Create a new account using their email and password, or

- Log in to an existing account (with credentials or third-party login, e.g., Github).
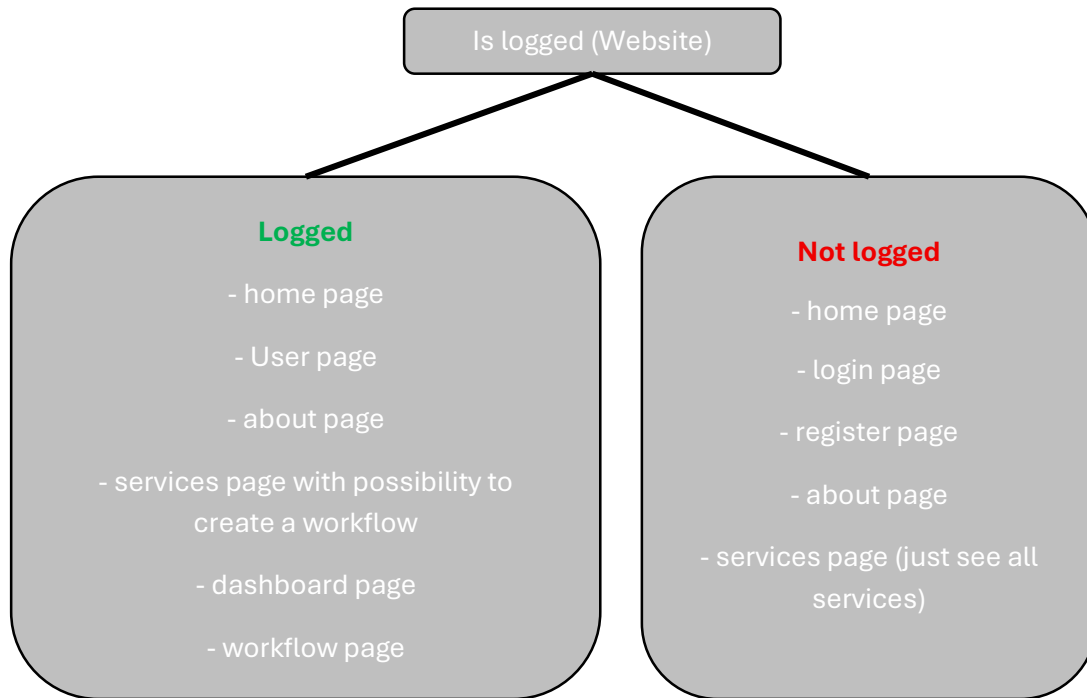

4th Step – Services Page (Logged-In Experience)
After logging in, users access the Services page with full functionality. They can now:

- Explore available services in detail.

- Create new workflows using the available services.

5th Step – Workflow Page

Users can visit the Workflow page to view, edit, and manage the automations they have created.

```
            ┌────────────────────────┐
            │   Is logged (Website)   │
            └────────────────────────┘
              ╱                      ╲
```
